

The airstrip FAA identifier is FL-90 and is on most current GPS data bases. The airstrip is private and requires a membership or prior permission prior to landing. The strip is grass and approximately 2000 feet in length. The runway alignment is 10-28 and is clear of obstructions on both ends.

Normally there are aircraft parked to the side of the runway, mid-point, on the south side.. Houses line both sides of the runway. When strong cross wind conditions exist, the approach and landing, if attempted, should be done with extreme caution. On short final be ready for a significant loss of wind component when transitioning below the level of the houses.
